

NASA PSYCHE MISSION

In late 2023, NASA will launch the Psyche mission, a journey to a unique metal-rich asteroid orbiting the Sun between Mars and Jupiter. What makes the asteroid Psyche unique is that it may consist largely of metal from the core of a planetesimal—an object that formed early in our solar system and can help us better understand planets like ours.

Watch the NASA Psyche launch broadcast online and cross off each box below when you hear any of these words mentioned. When you get a bingo, ask a grownup to share a photo of your board with us on Facebook or Twitter by tagging @NASASolarSystem and using the hashtag #MissionToPsyche!
